

## Software Engineer at Papers

### About Papers

Get a glimpse into a young and dynamic software engineering company, that works with many customers in various fields. Papers develops mobile and web apps and has a deep knowledge in mobile security. We're also a bit crazy about crypto here and work on various projects in the blockchain space.

### About the role

As part of the engineering team at Papers, we are looking for a motivated Software Engineer. As a Software Engineering Intern you have the opportunity to work on all of our software stack and learn about state-of-the-art web and mobile development. Technologies that you will work on are Ionic, Django, Android, iOS, Bootstrap and interfacing them with different programming languages like Javascript, Typescript, Python and Solidity. We will define a clear project for your internship where you will have the opportunity to work on in a self-driven manner.

### Your responsibilities

- Software Engineering in a clearly defined project
- Being integrated in the whole development cycle. Including planning, designing, implementation, testing and deployment processes

### What we look for

- You are available full-time for 12 weeks
- Experience in web technologies
- You care about code quality, testing and continuous refactoring
- Proficiency in German and/or English

## **Bonus Points**

- You can show us programming projects that you work on in your free time
- Crypto Enthusiast
- We love an entrepreneurial mindset

## **What we offer you**

- An amazing company culture and exposure to both users and customers
- A flat organizational structure that ensures your influence on products and projects we build
- A flexible schedule

## **Your application**

We are looking for passionate, self-driven individuals. Thus we are interested in links/information to any projects you have done inside/outside your day job Please send your complete application including CV, certificates and motivation letter via email to [a.decarli@papers.ch](mailto:a.decarli@papers.ch).
