

TRACKTICS

Computer Scientist Intern with Data Affinity

to support

Real Madrid Football Schools

www.TRACKTICS.com

Job Type: full-time internship

Location: Zurich

Salary: Depending on Experience

Languages: English and ideally German

Who we are

TRACKTICS is an award winning, innovative wearable startup. We enable every football player and team to track, analyse and improve performance on the football pitch. We've developed a wearable device and created beautiful apps for our powerful data analytics. For the first time, players and coaches from all levels have easy access to metrics like distance covered, number of sprints and tactical heatmaps. For better practice planning, player management and boosted motivation.

We got into European Space Agency's Incubation Program and the highly selective EuropeanPioneers Accelerator. Well-known Business Angels from football and other relevant industries are part of our team and we are delivering first products to excited customers.

Who we are looking for

A passionate Data or Computer Scientist who will help us to further develop our data analysis pipeline and work closely with our Back-End and Front-End developers towards new and exciting features for our platform. Tasks include early-stage feature exploration in collaboration with domain experts and integrating new features and tools to support the use of our products by our official partner, the Real Madrid Football Schools.

- Python, JS, C/C++ programming skills: particularly extending existing code
- Familiar with Pandas and Jupyter Notebooks– or definitely the willingness to learn them fast
- Experience with handling, processing and visualizing data sets
- Good understanding of statistics and signal processing
- Familiar with the Unix command line and version control using Git
- DevOps and infrastructure management skills– or the drive to get into it

Don't worry, you don't need to be a footballer! But if you love sports and are interested in wearables – even better! You will need to work independently and dependably. Above all, we expect you to be an active and keen team member who contributes to bringing our product to the next level.

What we offer

We're a powerful, interdisciplinary, highly skilled team that is growing fast and shares a huge passion for our vision of more accessible sports data. We foster a strong and fun startup culture in a relaxed working atmosphere. We offer flexible working hours together with a high degree of self-responsibility and freedom. You will find the perfect environment to learn a lot and contribute your very best to a high-potential project.

Become part of our great team and apply here: jobs@tracktics.com
